CORE is an Important Collaboration
Representing these Organizations Associated
with Otolaryngology-Head and Neck Surgery:

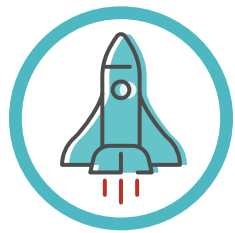

CORE

CENTRALIZED OTOLARYNGOLOGY
RESEARCH EFFORTS

You Can Make a Difference in
Otolaryngology Through Research!

Why CORE?

Launch Your Career

Funding to build your portfolio and compete for larger awards

Strengthen Your Skills

Grant application experience modeled on National Institutes of Health (NIH) standards

Create Lasting Impact

Conduct research that advances care and shapes best practices

Build Your Network

Connect with researchers nationwide for collaboration and mentorship

Since 1985, CORE (Centralized Otolaryngology Research Efforts) has been investing in the future of otolaryngology by empowering researchers and advancing discoveries that transform patient care. The program has awarded over 700 grants totaling more than \$13 million to support projects that drive innovation and excellence across the specialty.

By bringing research programs together under one coordinated system, CORE expands opportunities, reduces the aggregate costs of individual grant programs, and unifies funding efforts across the specialty to highlight the most promising work in otolaryngology-head and neck surgery. This unified approach positions the specialty to showcase its most promising research to the NIH and other major funders, helping secure greater investment in innovation.

Are You Ready to Take the Next Step? Apply for a CORE Grant Today!

Applications for CORE grants are submitted online through ProposalCentral™, our secure e-granting platform, at www.proposalcentral.com.

We encourage applicants to allow plenty of time to plan, organize, and write a compelling proposal that can compete successfully for funding.

What makes a successful CORE grant proposal:

- ✓ Potential for advancing the science and practice of otolaryngology-head and neck surgery
- ✓ Innovative ideas, methods, or approaches that move the field forward
- ✓ Strong study design with a clear, well-structured methodology
- ✓ Demonstrated ability to complete the project as proposed
- ✓ Support and resources from your department or organization
- ✓ Skills, experience, and commitment of the research team
- ✓ Reasonable and well-justified budget
